USE OF EXTENSIONS & ADAPTERS

When using an extension or adapter (increasing the effective length of the torque wrench) the output torque value will change. To calculate the new torque output of the wrench use the following formula:

\[ T' = T \cdot \frac{L'}{L} \]

\( T' \) = Torque carried at end of adapter
\( T \) = Distance between square drive and head position
\( T \) = Wrench dial reading
\( L' \) = Length of adapter or extension

SAFETY MESSAGES

WARNING
- Read operational manual completely before using torque instrument and store for future reference.
- Wear safety goggles—both user and bystanders.
- An out of calibration torque wrench can cause part or tool breakage.
- Periodic re-calibration is necessary to maintain accuracy.
- Do not exceed rated torque as over-torquing can cause wrench or part failure.
- Do not use torque instrument to break covers loose.
- Do not use cleaver extensions on the handle to apply torque.
- Broken or slipping tools can cause injury.

CAUTION - RATCHET
- Ratchet mechanism may slip or break if dirty, mistreated or worn parts are used, or direction lever is not fully engaged. Ratchets that slip or break can cause injury.

MAINTENANCE / SERVICE
1. Clean torque wrench by wiping. Do not immerse.
2. Store torque wrench in protective case.

SETTING MEMORY FOLLOWER NEEDLE ON SINGLE SCALE MODELS

Follower Needle Dial

Before using all models of dial torque wrenches, it is strongly suggested to calibrate them 5 times at full scale in the torque direction in which they will be used. Dial torque wrenches must always be prepped before use. To set orange pusher & Blue follower needle for right-hand (R.H.) torqueing:

1. Turn bezel in left-hand (CCW) direction until blue memory follower needle contacts orange pusher needle.
2. Continue to turn bezel left-hand (CCW) until blue memory follower needle is lined up with zero (0) of outer graduation on portion of dial for IN LB, FT LB, METRIC readings.
3. Apply force on the wrench handle until blue follower needle reaches desired torque. When force is released orange pusher needle will return to zero and blue memory follower needle will remain at torque applied.
4. For repetitive torque operations (once the zero has been set as instructed above), the blue memory follower needle can be retained at zero by use of the follower needle knob. It is ready for the next operation.
5. IMPORTANT - When using the memory feature always make sure that the blue follower memory needle is on zero before torquing.

SETTING ELECTRIC CONTACT ARM ON SINGLE SCALE MODELS

Electric Signal Dial

1. Turn bezel (CCW) until light and buzzer goes on.
2. Continue to turn bezel (CCW) until inner zero of desired scale (English or Metric) is lined up with orange pusher needle.
3. Now turn bezel (CW) until light goes off and orange pusher needle is aligned with desired torque graduation in inner portion of scale orange pusher needle is now preset to desired torque value.
4. Apply force to handle in the (CW) direction. When the preset torque value is reached the light and buzzer will go on. When force on the handle is released orange pusher needle will return to the preset torque value.
5. To change the preset torque value to another, turn the bezel as required to the new torque value within the same dial graduation and proceed as in step 4 above.
6. For CCW torque reverse directions in steps 1 through 5.
7. IMPORTANT - Always make sure that the electric contact arm is prepped.
